Project *Pregnabit*[®] CTG telemedicine system

The world's first comprehensive telemedical solution for fetal health monitoring. Grinn was able to carry out a device which meets rigorous medical regulations.

HEALTH-NCP-NET 2.0 project is funded by the European Commission

Project circa

The stand-alone smart alarm with sleep sensors that helps you sleep. Grinn implemented a thin sensor underneath the mattress that measures movement to understand sleep cycles.

HEALTH-NCP-NET 2.0 project is funded by the European Commission

Project **sani nudge**

A revolutionary hand sanitizer that helps hospitals improve patient care. Our experience with scientific applications enabled to create a solution that helps eliminate medical errors.

HEALTH-NCP-NET 2.0 project is funded by the European Commission

Automatic, spring-driven drug delivery device that enables the user to control the dose injection process. Grinn is a part of a technological solution, which is paramount for safe drug administration.
